OOPS Java

Inheritance

The child inherits the functions from parent class.

Encapsulation

Protects data by keeping it private and exposing only necessary parts.

1   2   3   4   5

Platform Independent

After compilation, the class file can be opened in any OS.

Abstraction

Hides internal details and shows only essential features to the user.

Polymorphism

Allows the same method to perform diffrently based on the object.
